Lab 3 (Oct. 15) #Team1

Sprint-2:

Retrospective meeting: any updates since last meeting? any issues? Demo: client can connect to server (i.e., send/receive dumb messages) Planning meeting:

- what are the fields of interest to search?
- breakdown the goals into the actionable tasks
- define task completeness criteria (test cases if needed)

Feature:

- fields of interests to search

Search by player name, nationality, position, overall rating, age, potential growth, player's team (if any.)

GUI design and User test cases:

- for testing the search feature

Test backend search function, where user inputs player name and our database then finds player.

Taskboard:

- Done list of last sprint
Added client and server communication. Divided our team into front end and back end developers.
We worked on making a basic homepage.html, which we used to test basic html layouts.

Front end:
- Calvin
- Mustafa
Backend:
- Evan
- Abraham:
Fullstack:
- Hoda

ToDo task list for the next sprint

- what update/insert/delete features to implement?
Update:
Player stats
Search:
- Player Name
- Players' countries

Delete:

Player
